**Subject:** Edits in 3rd FYR by Site Attorney  
**Date:** 04/06/2011 04:40 PM

---

Jean: I will cut and paste some questions our site attorney Gloria Small Moran has made in the draft 3rd FYR. You can give an answer or change sentence so more details may not be necessary.

1. As shown in Table 2 below, these springs were sampled quarterly from 1996 through 1999 except during periods of insufficient flow. In year 2000, spring sampling was reduced to only New Cricket Spring since this is the only spring that continues to be impacted with PCP (in microgram per liter or ppb). Monthly sampling was initiated May 15, 2000. Three samples are collected monthly at the site: one from the mouth of the spring, one from the weir and duplicate sample generally from the weir. The third sample is used by the laboratory to run their QA/QC analysis. Six surrogate compounds are evaluated for recovery (see analytical reports Shawn, where are these reports? Citation needed) Data from the sampling is shown in Table 2 and Figure 2.

2. System Operations and Maintenance (O & M): Groundwater treatment system operations are conducted by an environmental contractor Shawn, who is this? Name or company and relationship to site needed. The contractor is responsible for maintaining the groundwater treatment system in good operating condition and collecting monthly operational samples, as well as, inspecting the Site fencing, vegetative cover, storm water drainage system and buildings.
